

# SENIOR PRODUCTION TECHNICIAN (MEDICAL DEVICE, CLASS 7 CLEANROOM)

*Salvia BioElectronics, High Tech Campus 41, Eindhoven, The Netherlands*

## ABOUT US

We are Salvia: an innovative startup active in the emerging field of bioelectronics. We derived the name Salvia from the Latin word *salvere*, which means to stay healthy. In addition, the Salvia-herb has been used to treat headaches, pain, and mental disorders over centuries. Our mission is to deliver bioelectronic solutions that restore health for people suffering from chronic migraine. Salvia is ambitious: we want to provide drug-free solutions that are effective and inherently side-effect free and make our novel solutions widely accessible.

## THE CHALLENGE

We offer a challenging position for an experienced Production Technician with opportunities to grow with the organization. Salvia is building up its manufacturing facility from pilot to commercial production. You will join Salvia's production team where your key responsibilities are in setting up, optimizing and supporting manufacturing operations in collaboration with R&D, Quality and Operations. You will quickly become the 'go to person' for several duties of specialized nature in our clean room. You will set up and operate a variety of processes used in the production of our product. You will work from written/verbal instructions to perform production tasks. You will check and inspect the product against quality metrics. As the organization transfers to routine operations, you will train and support product builders and help coordinate day to day operations.

You enjoy working at the heart of a small and multi-disciplinary team, creating life-changing medical device products. Most importantly, you bring an eye for detail, are well organized and have a disciplined nature.

## RESPONSIBILITIES

- Set-up and operate equipment; perform semi-routine manufacturing processes according work instructions.
- Inspect product for quality and adherence to specifications.
- Complete and ensure accuracy of all processes and associated required documentation/records.
- Train and support product builders as the organization matures.
- Drive towards consistent production routine and product quality.

## YOUR PROFILE

- Minimum 3 years experience in a comparable role.
- Experienced with working in cleanroom conditions ( $\leq$  Class 7). Prior experience in medical device assembly including cleaning, silicone molding, and interconnect technologies, is considered an advantage.
- Accurate, with an eye-for-detail.
- Disciplined, and ability to organize and prioritize multiple tasks.
- Team player with excellent technical skills.
- Secondary vocational education (MBO) in an engineering or laboratory discipline.
